

**Acetone.**

***Can I use acetone to remove false nails?***

Acetone can be used to remove acrylic fingernails. Soak some cotton balls in the acetone then place cotton on finger and cover with some foil. Wait at least 10 minutes and the nails should come off.

***Can Acetone be used to clean a polished surface?***

Acetone will attack most types of lacquer and polish, we would not recommend using it on such surfaces.

***I have heard about a test using acetone to see if a plastic is glue-able***

This is a quick test that gives a result for most plastics. Rub a small area of the plastic with acetone, if it becomes sticky or tacky then generally the plastic is glue-able with an appropriate solvent adhesive. If the acetone simply dries off then the plastic needs to be fixed using plastic welding.

***Is Acetone safe to use on my skin?***

Acetone is considered safe to use on your skin but prolonged exposure to both the liquid and fumes is not recommended. Should any irritation occur rinse skin with water.

***I want to use acetone on a certain surface, will acetone effect the surface finish?***

Acetone is an extremely strong solvent. It can attack the top layer of many surfaces, always perform a small test on a hidden part of the surface to ensure no damage will be caused.

***Can I use acetone to remove false nails?***

Acetone can be used to remove acrylic fingernails. Soak some cotton balls in the acetone then place cotton on finger and cover with some foil. Wait at least 10 minutes and the nails should come off
